

PetYield

Raise NFT pets that passively earn tokens through daily mini-games

The Problem & Our Solution

Hardcore play-to-earn games demand too much time, alienating casual players who want simple daily crypto earning.

- Hardcore P2E requires hours daily, excluding casual mobile-style gamers
- PetYield lets players mint an NFT pet that earns yield passively over time
- A few minutes of daily mini-games boost yield multipliers for 24 hours
- Pets level up, unlock traits, and can be bred, creating a casual earn loop
- All stats, earnings, and breeding run on transparent Solana smart contracts

How It Works

A simple loop: mint, play, claim, level up, breed - all powered by on-chain logic on Solana.

- User flow: mint pet, play daily mini-game, claim rewards, level up, breed pets
- Mini-game is a short tap or timing challenge that boosts yield for 24 hours
- On-chain: Anchor program stores pet stats, yield rate, and breeding logic
- NFTs minted via Metaplex, randomness for breeding traits via Switchboard
- React Native app talks to Solana program and Solana Pay for claim transactions

Built with

Solana, Anchor, React Native, Metaplex, Solana Pay, Switchboard (for randomness), Node.js

Why Now & What's Next

Solana's low fees make frequent micro-claims and boosts economically viable for casual play-to-earn.

- Cheap Solana transactions make daily claim and boost loops viable at small scale
- Casual gamers want low-effort crypto earning without hardcore time commitment
- Next: social pet showcase and leaderboards to drive daily engagement
- Next: PvE pet battles adding a bonus yield mechanic for active players
- Next: mobile app launch with push notifications for daily reminders
